Week 3: Sales Data Analysis — Pivot Tables & Dashboard (Excel)

Introduction

Week 3 focused on building an interactive sales analysis workflow in Excel, covering data cleaning, pivot tables, and dashboard design using a 2026 sales dataset spanning January to April.

Data Preparation

- The raw sales dataset included Date, Region, Salesperson, Product, Quantity, Unit Price, Total Sales, Month, and Year columns.
- An additional calculation section was added to compute percentage price increases and the resulting new unit prices.
- Data was cleaned and organized on a dedicated 'Clean Data' sheet before further analysis. (Figures 1–2)

	A	B	C	D	E	F	G	H	I	J	K	L
1	Date	Region	Salesperson	Product	Quantity	Unit Price	Total Sales	Month	Year	Increase	New Unit Price	
2	1/1/2026	North	Ali	Laptop	5	10000	50000	January	2026	5%	50000.0	
3	1/2/2026	South	Ahmed	Mouse	8	2500	20000	January	2026	10%	450000.5

Pivot Table Analysis

Pivot tables were built to summarize total sales by product, by month, and by salesperson:

- **By Product:** Mouse and Monitor generated the highest total sales, while Printer showed a negative total, indicating returns or data-entry corrections.

- **By Month:** January and February produced the strongest sales, whereas March recorded a large negative figure.
- **By Salesperson:** Fatima and Ali were the top-performing salespersons, while Ahmed's total was negative for the same reason noted above.

Figure 3: Pivot tables — Sales by product, month, and salesperson

Interactive Dashboard

A dashboard was created summarizing overall performance with interactive slicers for Month, Product, and Salesperson:

- Total Sales: 500,000 | Total Quantity: 500 units | Total Orders: 100
- Sales by Product (pie chart), Monthly Sales Trend (line chart), Sales by Region, and Top Performing Salespersons (bar charts) were included for quick visual insight.

Figure 4: Sales Dashboard 2026

Key Insights

- Pivot tables made it possible to quickly summarize a large transactional dataset by multiple dimensions.
- The dashboard's slicers allow interactive filtering by month, product, and salesperson without altering the underlying data.

- Negative values traced to specific entries (e.g., Printer, March, Ahmed) highlight the importance of data validation before reporting.

Conclusion

Week 3 strengthened practical skills in pivot tables and interactive dashboard design in Excel, showing how raw transactional data can be transformed into a clear, decision-ready visual summary.
